

Federico Irarrazaval

FULL STACK DEVELOPER

[Portfolio](#)

About me

I define myself as a proactive, methodical, and constantly learning professional with a strong focus on problem-solving and process optimization.

As a developer, my focus is on scalable software architecture, code efficiency, and system integration. I have experience in developing REST APIs and microservices, working with SQL and NoSQL databases (PostgreSQL and MongoDB), and applications in AWS cloud environments.

Additionally, I have training and experience in frontend development with React and Redux, allowing me to take on full-stack solutions when needed.

Technologies

JavaScript | TypeScript | Node.js
Express.js | Koa.js | Fastify | VTEX IO
MongoDB | Mongoose | PostgreSQL
Sequelize | API REST | AWS
React | Redux
Git | GitHub | Railway | Vercel | Heroku

Skills

- Agile Methodologies
- Teamwork
- Effective Communication and Leadership
- Advanced English (C2 Proficient)

Hobbies

I enjoy reading, technology, and gaming.

I am also interested in sports in general. Currently, I practice archery.

Professional Experience

ITGlobers - Back End Engineer (Jun. 2022 - Present)

- Backend development for marketplaces, e-commerce, and various technological solutions, building scalable APIs and microservices with Node.js, TypeScript, PostgreSQL, MongoDB, and AWS.
- Proactive leadership in backend development, organizing tasks, managing workflows, and ensuring efficient development processes.
- Development of REST APIs for system integration using Koa.js, Express.js, and Fastify.
- Implementation of secure authentication and authorization with JWT and OAuth2.
- Performance and scalability optimization in cloud environments, including integrations and enhancements in serverless architectures with AWS Lambda, S3, DynamoDB, SES, and CloudWatch.
- Design and development of scalable architectures, applying best practices and Clean Architecture.
- Integrations with VTEX IO e-commerce platforms, including architecture audits and custom integrations for process optimization.

Academic Experience

Bootcamp Full Stack Web Developer - Henry (2022)

- Intensive training in full-stack development, covering Node.js, Express.js, PostgreSQL, MongoDB, React, and Redux.
- Application of SCRUM methodologies and GitHub Workflow in agile environments.
- Development of projects applying API integration, authentication, cloud deployment, and system optimization.

[Kinema Project](#)

Group project selected among the top 4 in the Henry bootcamp, developed in an agile SCRUM environment. It is a movie and series streaming platform featuring functionalities such as third-party authentication, payment integration, user and content management, real-time notifications, and an advanced admin panel.

Stack: Javascript, Node.js, Express.js, MongoDB, Moongose, React, Redux, Chakra UI, CSS, Cloudinary, Firebase, Stripe, API REST, Email.js, Railway and Vercel.

[Gaming & Beyond Project](#)

4-week individual project, where I designed and developed a video game platform with external API integration, allowing users to create, modify, and delete games. I implemented an advanced search system, dynamic filtering, and pagination to enhance the user experience.

Stack: Typescript, Javascript, Fastify, Express.js, MongoDB, PostgreSQL, API REST, React, Redux, CSS, Railway and Vercel.
