SUMMARY

Product-minded Senior Backend Engineer with 4+ years building integration and data reconciliation platforms at scale, and 11+ years of professional experience. I work end to end: I meet with stakeholders, turn business needs into functional definitions and specs, design the architecture and build it. I co-led a multi-tenant payment reconciliation platform processing 1M+ transactions per week, now lead its new development, and build AI in production: an MCP server and Claude/Gemini integrations. Previously 7+ years as a labor & employment attorney, most recently at Baker McKenzie, leading legal teams, which gave me experience in client relations, negotiation and regulated environments.

EXPERIENCE

Senior Backend Engineer — nubceo · Fintech SaaS · Remote **Aug 2024 – Present**

- Co-led the payment reconciliation platform build with the tech lead; since 2025, lead all new sales reconciliation work: multi-tenant, per-client rules, AWS SQS, audit trails; 1M+ transactions/week per client, 97% auto-reconciled, 95% less processing time.
- Informal lead on reconciliation initiatives and other cross-functional projects (backend, frontend, QA): define product scope with the CFO and stakeholders, write the functional specs and backend technical specs, contribute to frontend definitions as the team's go-to person on the product, coordinate the team, review all PRs and report status.
- Co-built a production MCP server in TypeScript: tools, prompts and resources exposing internal APIs over stdio and streamable HTTP, running authenticated and multi-tenant.
- Shipped two user-selectable LLM integrations (Claude, Gemini): reconciliation-sequence suggestions for the ~3% the engine cannot close (the model proposes, a person approves) and promotion PDF-to-JSON extraction.
- Designed and built the promotions platform: full CRUD and an async matching engine that tags each sale with the promotion applied, enabling promotion ROI analysis.
- Core contributor to event-driven accounting automation: real-time, multi-currency general ledger entries.

Backend Engineer — ITGlobers · E-commerce integrations · Remote **Apr 2022 – Aug 2024**

- Built 20+ integrations between client ERPs and VTEX IO: order-status flows, inventory sync, 6+ payment platforms, Google Analytics, and bulk-load scripts handling 100K+ sales.
- Built REST APIs and microservices with Node.js, TypeScript, Koa.js, Express.js and AWS (Lambda, SQS, SNS, CloudWatch).
- Gathered client requirements, defined functional solutions and proposed architectures; led task assignment.

Senior Attorney — Baker McKenzie · Labor & Employment **Aug 2015 – Feb 2022**

- Led teams of paralegals and junior attorneys advising local and multinational companies on cross-border negotiations, M&A due diligence, compliance and litigation.

SELECTED PROJECTS

Personal Services Platform (github.com/Fedelra/Project-Personal-Services): serverless microservices on AWS (Lambda, API Gateway, JWT authorizer, DynamoDB, SQS FIFO + DLQs), IaC with Serverless Framework, CI.

MCP Server & Client Reference (github.com/Fedelra/MCP-Server-Client-Reference): personal reference build, separate from the production server: TypeScript and Python; tools, resources, prompts, sampling and roots over stdio and streamable HTTP.

Movie & TV Show API (github.com/Fedelra/Project-Movie-TvShow-API): Fastify, TypeScript, Zod, JWT, MongoDB; AWS S3 file storage, DynamoDB records and an S3-triggered Lambda for upload notifications; Clean Architecture, Vitest tests, Docker, CI.

TECHNICAL SKILLS

Backend: TypeScript, JavaScript, Node.js, Fastify, Express.js, Koa.js, REST APIs, Microservices, Event-driven, JWT/OAuth2

Data: PostgreSQL, DynamoDB, MongoDB, SQL, Sequelize, Mongoose

Cloud: AWS (Lambda, API Gateway, ECS, SQS FIFO/DLQ, SNS, RDS, S3, SES, IAM, SSM, Secrets Manager, CloudWatch), Serverless Framework, Docker, GitHub Actions (CI/CD)

AI / LLM: Model Context Protocol (MCP), Claude API, Gemini API, LLM integrations, Claude Code

Product & Delivery: Requirements gathering, Functional & technical specs, Solution design, Stakeholder management

Other: React, Redux, VTEX IO, Git, Agile (Scrum), Jira

Languages: English C2 Proficient (EF SET 71/100), Spanish native

CERTIFICATIONS

AI: Anthropic — Introduction to MCP; MCP: Advanced Topics · Platzi — Claude AI; Claude Code (2026)

Cloud & Backend: Platzi — AWS, Node.js, TypeScript (2023–24) · freeCodeCamp — Legacy JS Algorithms & Data Structures

EDUCATION

Full Stack Web Developer Bootcamp (1,000+ hours) — Henry **Feb 2022 – Jun 2022**

Law Degree and Specialization in Labor & Employment Law — UCA, Argentina **2008 – 2020**
